The Problem

Requirements

Provide an easy way to request
and offer help

Gamify the experience

Visualize gathered data

Our solution is called **Favor**

Favor connects people in need with those who want to help, by providing a simple way to do favors.

Workflow

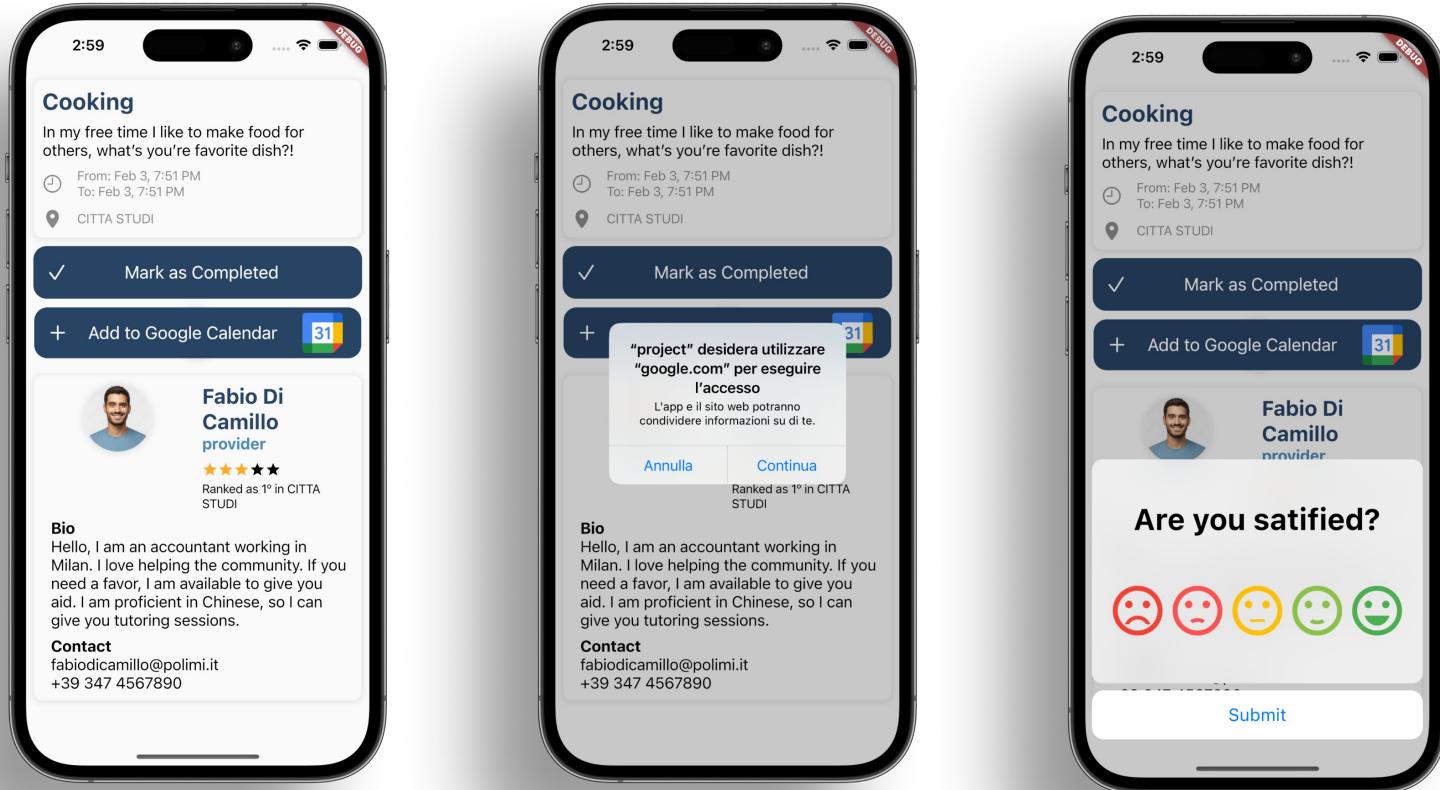

The image displays three sequential screenshots of the Favor mobile application interface, illustrating the user workflow for booking services.

Screenshot 1: Home Screen
The screen shows the "Your Booked Favors" section with a card for "Fabio Di ... caller" (HOME REPAIR) booked at 13:19. Below it is the "Favor Categories" section with icons for DOG SITTING, BABY SITTING, HOME REPAIR, HOME CLEANING, and OUTDOOR CLEANING. The "Recommended for you" section features a card for "Fabio Di Camillo" (provider) under the "Cooking" category. The card includes a bio: "In my free time I like to make food for others, what's your favorite dish?", contact info (From: Feb 3, 7:51 PM; To: Feb 3, 7:51 PM; Location: CITTA STUDI), and a "Book it" button. The bottom navigation bar includes Home, Explore, New Favor, Leaderboard, and Account.

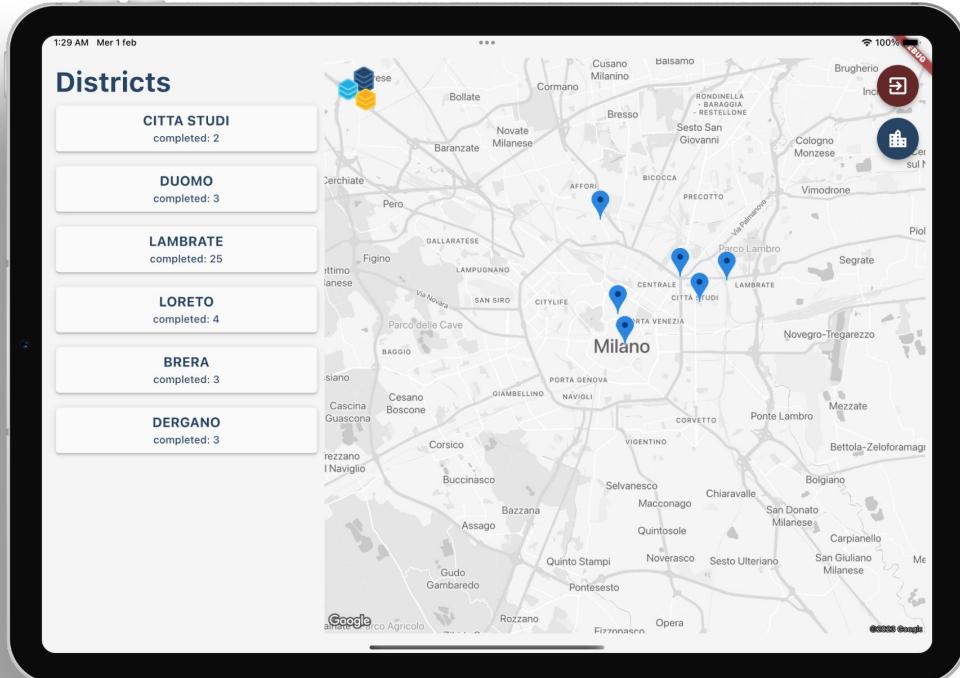

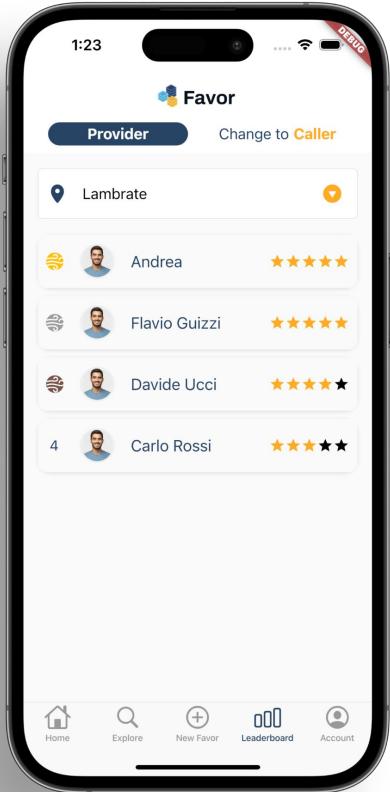

Screenshot 2: Provider Profile
The screen shows the profile of "Fabio Di Camillo" (provider) under the "Cooking" category. The bio states: "In my free time I like to make food for others, what's your favorite dish?". The contact information is identical to the previous screen. The "Book it" button is present at the bottom. The bottom navigation bar is visible.

Screenshot 3: Home Screen after Booking
The screen shows the "Your Booked Favors" section with cards for both "Fabio Di ... caller" (HOME REPAIR) and "Fabio Di ... provider" (COOKING). The "Favor Categories" and "Recommended for you" sections are also visible. The bottom navigation bar is present.
